

SYNTHETIC FIXTURE ? NOT A REAL INSPECTION RECORD

SOP-CORR-014

CORROSION FINDING ASSESSMENT AND ESCALATION

Revision 4 · Effective 2026-01-01 · Synthetic training document

1. PURPOSE

1.1 This procedure defines how measured wall loss found during a thickness survey is classified, and when a finding must be escalated to an authorized integrity engineer.

2. SCOPE

2.1 Applies to all pressure-containing piping and vessel components covered by the site thickness survey programme.

3. CLASSIFICATION OF WALL LOSS

3.1 Wall loss is calculated as nominal wall thickness minus the minimum measured thickness at any grid point on the component.

3.2 Wall loss of 1.0 mm or less is recorded as ROUTINE. The component remains on its existing survey interval.

3.3 Wall loss greater than 1.0 mm and up to and including 2.0 mm is recorded as MONITOR. The survey interval for that component is halved.

3.4 Wall loss exceeding 2.0 mm is recorded as ESCALATE. Escalation is mandatory and may not be waived by the inspecting technician.

SYNTHETIC FIXTURE ? NOT A REAL INSPECTION RECORD

SOP-CORR-014 (continued)

4. ESCALATION PROCESS

4.1 An ESCALATE finding is referred to an authorized integrity engineer within one working day of the survey.

4.2 The integrity engineer performs a fitness-for-service assessment before the affected component is returned to full operating rate.

4.3 A written approval note recording the assessment, the applicable clauses of this procedure and the engineer's decision is filed against the asset record. The note is not valid until signed by the engineer.

4.4 No automated system, decision-support tool or reporting workflow may record the engineer's approval on their behalf. The signature must be applied by the authorized person.

5. COATING BREAKDOWN

5.1 Where external coating breakdown is observed alongside measured wall loss, the finding is treated as external corrosion under disbonded coating and the coating condition is recorded with the thickness result.

6. RECORDS

6.1 Survey results, photographs and the signed approval note are retained against the asset record for the life of the asset.
